

thrombi stat

an accurate, practical and cost effective solution to INR testing

accurate INR testing

thrombi stat INR test systems are able to accurately analyse samples of capillary whole blood

thrombi stat INR test systems provide high quality, precise INR results:

- comparable to routine laboratory testing
- compliant with the NEQAS EQA scheme

practical INR testing

thrombi stat INR testing system is ideal for accurate near patient INR testing with single sample test results available in under 2 minutes

compatible with the Manchester Capillary Reagent Kit and dose calculation software

thrombi stat – for practical anti-coagulation monitoring in:

- hospital outpatient clinics
- community pharmacies
- GP surgeries

cost effective INR testing

thrombi stat INR test system allows you to make significant savings in your anti-coagulation monitoring service without compromising on accuracy

try the thrombi stat cost calculator to find out how to:

- make significant cost savings per patient
- reduce overall clinic operating costs

thrombi stat

an accurate, practical and cost effective solution to INR testing

our range of thrombi stat INR test systems:

thrombi stat MC1

Single Channel Coagulation Analyser

the portable thrombi stat MC1 is a single channel coagulation system that produces high quality INR test results at the touch of a button. thrombi stat MC1 is ideal for use in hospital outpatient clinics, community pharmacies and GP surgeries

thrombi stat MC4

Four Channel Coagulation Analyser

thrombi stat MC4 is the ultimate coagulation system ideal for use in hospital laboratories and community clinics. Its four measuring channels allow for a greater throughput of patient samples resulting in an efficiently run anti-coagulation service

- provides rapid and accurate INR results
- high definition display

compatible with the Manchester Capillary Reagent Kit and dose calculation software
